Components for CVR3 Rack used in assembly

CVR Rack
(x1)

Pin Head
Torx Screws
(X4)

Nylon Wall
Plugs
(X4)

Pin Head Torx
Screws Tool Bit
(X1)

Washers
(X4)

1. Site selection

When selecting a site for your new bicycle rack, the most important advice is;

Do not try to hide it, as it will not be used!

Suitable locations include;

- Adjacent to entrance doors and in line of sight of a window
- Near high pedestrian traffic
- Covered areas

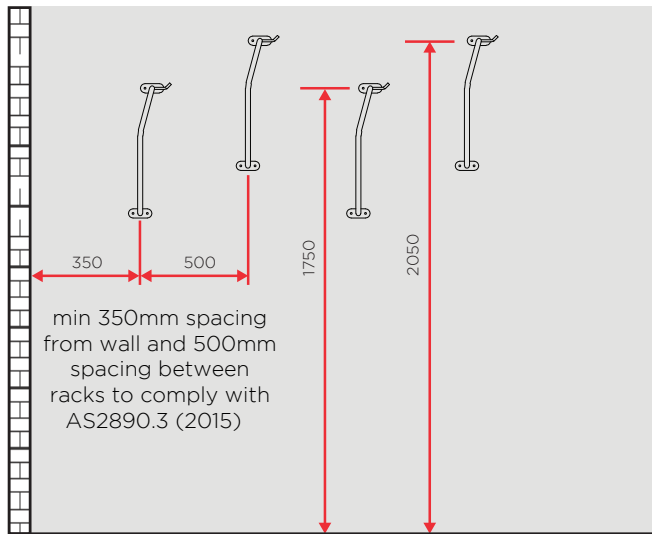

Other things to remember;

- Where a rack is being installed at an existing location, the rack should be placed where bicycles are currently parked
- When using a garage location, it is recommended to use a parking bay that is nearest to an entrance door.

2. Access and clearance

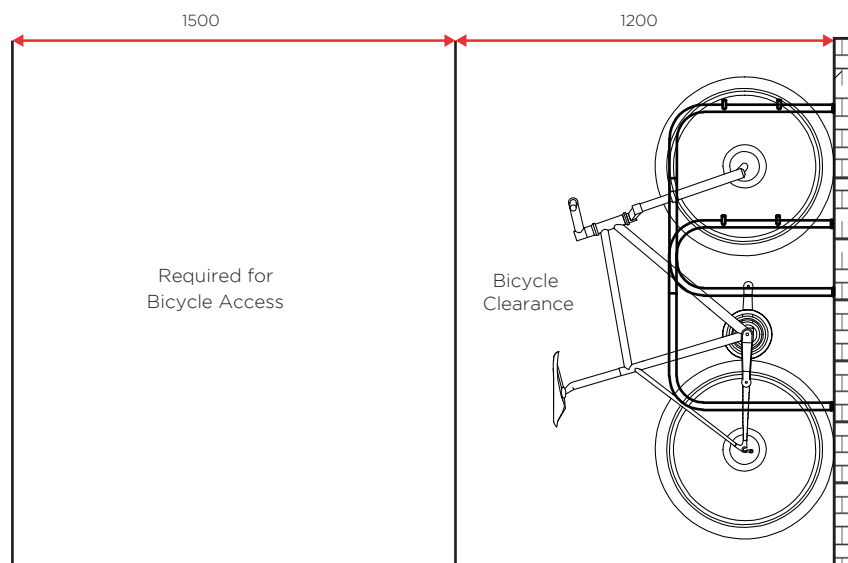

- If mounting multiple racks, measure mounting distance between **racks and other obstructions** and height from ground
- Reduced spacings of 400-500mm are possible where compliance with AS2890.3 (2015) is not required. Reduced spacing is less user friendly.

- If adjacent racks are all mounted at the same height, they must be positioned a minimum of 700mm centre to centre, and 350mm to any obstruction.

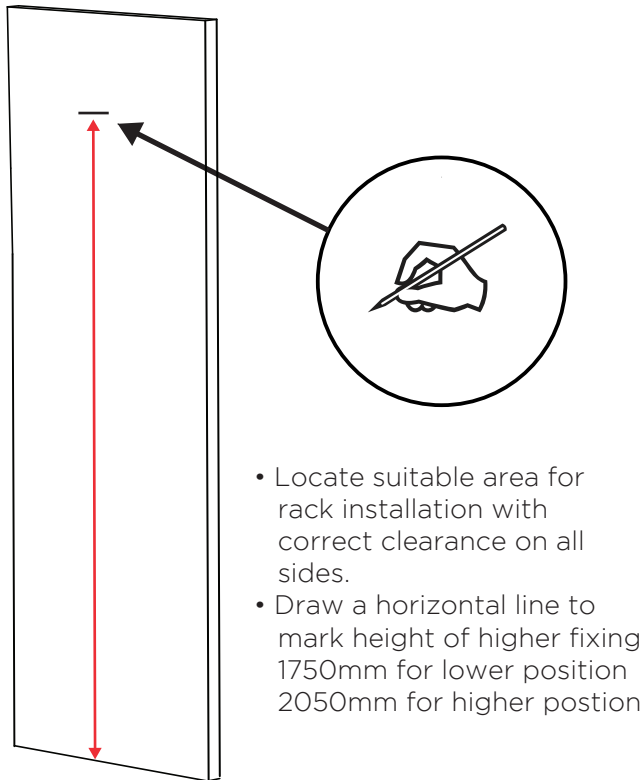

- If mounting only one rack, the rack should be fixed in lower position to minimise lifting for cyclist

3. Locate and measure suitable location

4. Mark and drill fixing points

5. Fix rack into position

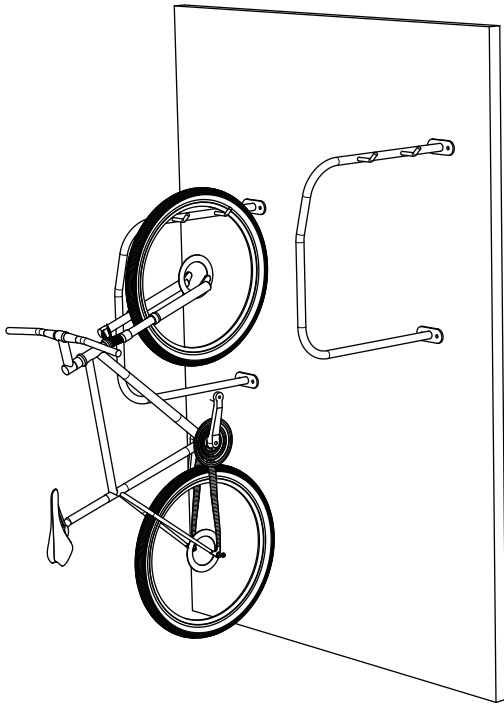

- Tap nylon sleeves into holes. Place rack in position and partially tighten screws starting from the top position. Once all nuts are on, continue to tighten until firm.
